# Verify the health of the MetroCluster configuration

Before starting an upgrade on a Fabric MetroCluster configuration, you must check the health of the MetroCluster configuration to verify proper operation.

## Steps

1. Verify that the MetroCluster components are healthy by using the following command:

```
metrocluster check run
```

```
metrocluster_siteA::*> metrocluster check run
```

The operation runs in the background.

2. After the `metrocluster check run` operation completes, view the results by using the following command:

```
metrocluster check show
```

After approximately five minutes, the following results are displayed:

```
metrocluster_siteA::*> metrocluster check show
Last Checked On: 4/7/2019 21:15:05
Component          Result
-----
nodes              ok
lifs               ok
config-replication ok
aggregates         warning
clusters           ok
connections        not-applicable
volumes            ok
7 entries were displayed.
```

3. Check the status of the running MetroCluster check operation by using the following command:

```
metrocluster operation history show -job-id 38
```

4. Verify that there are no health alerts by using the following command:

```
system health alert show
```
